

1 ORGANIZATIONAL STRUCTURE (MASTER DATA MODEL)

We must standardize this first.

Centers (Create as DocType: Center)

Center Name	Type Location
Child Development Center (Boys) Tongi	Boys Tongi
Child Development Center (Girls) Konabari	Girls Konabari
Child Development Center (Boys) Fulerhat, Jashore Boys Jashore	

HQ

Name

DSS Head Office Agargaon, Dhaka

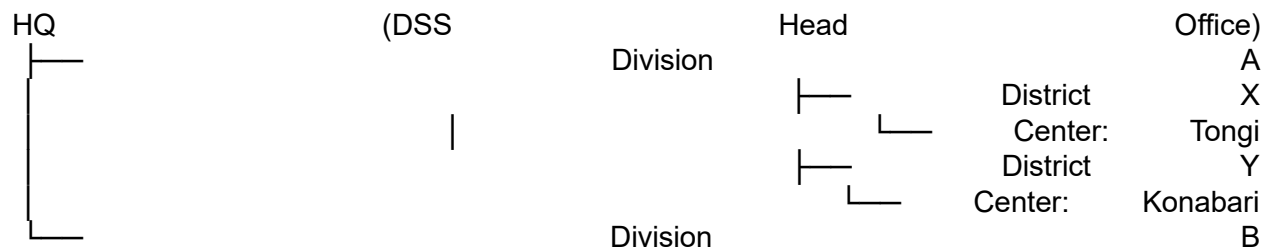

Hierarchy Design

You should NOT hardcode roles — instead:

Create DocType: Administrative Unit

Field	Type
unit_name	Data
unit_type	Select (HQ / Division / District / Center)
parent_unit	Link (Administrative Unit)
linked_center	Link (Center)

Example Structure

2 ROLE-BASED ACCESS CONTROL (VERY IMPORTANT)

We implement **2-layer security**:

Layer 1: Role Permission

Layer 2: User Permission (Data Filtering)

Roles & Access Mapping

Role	Scope	Access Type
Head Office	All Centers	Global
DD Division	Division	Filtered
DD District	District	Filtered
Superintendent	Center	Full + Approval
Probation Officer	Center	Review
Case Worker	Center	Review
House Parent	Center	Draft
Worker	Center	Draft
Center Admin	Center	Full Control
Super Admin	All	Full Control

User Permission Setup (CRITICAL)

In ERPNext:

Use User Permission

Role	Apply Filter On
DD Division	Administrative Unit (Division)
DD District	Administrative Unit (District)
Center Roles	Center

Role	Apply Filter On
------	-----------------

Head Office	No restriction
-------------	----------------

Data Link Rule

Every DocType MUST include:

center	(Link)
administrative_unit	(Link)

This ensures filtering works everywhere.

3 WORKFLOW HIERARCHY (ACTUAL FLOW)

This is your **core approval chain**:

Worker	
↓	
House	Parent
↓	
Case	Worker
↓	
Probation	Officer
↓	
Superintendent (FINAL APPROVAL)	

Workflow Example (ALL FORMS)

States:

Draft	(Worker	/	House	Parent)
→	Reviewed	by	Case	Worker
→	Reviewed	by	Probation	Officer
→	Approved by Superintendent			

Workflow Permissions

Stage	Role
Draft	Worker / House Parent
Review 1	Case Worker
Review 2	Probation Officer

Stage	Role
Final Approval	Superintendent

ROLE-BASED DASHBOARD DESIGN

Now the most important part.

4.1 HEAD OFFICE DASHBOARD

 Full national-level visibility

KPIs:

- Total Residents (All Centers)
- Active Cases
- High Risk Cases
- Monthly Admission vs Release
- Center-wise comparison

Charts:

- Center Comparison Bar Chart
 - Risk Distribution Pie Chart
 - Case Trend Line (Monthly)
-

4.2 DD DIVISION DASHBOARD

 Only their division

KPIs:

- Residents in Division
- Active Cases
- Pending Approvals
- High Risk Count

Filter:

administrative_unit = Division

4.3 DD DISTRICT DASHBOARD

 District-level control

KPIs:

- Center performance in district
 - Pending workflow approvals
 - Risk alerts
-

4.4 SUPERINTENDENT DASHBOARD

 Decision-maker dashboard

KPIs:

- Pending Approvals (CRITICAL)
- High Risk Residents
- Cases awaiting closure
- Overdue cases

Alerts:

- Cases pending > 7 days
 - High risk without action
-

4.5 PROBATION OFFICER DASHBOARD

KPIs:

- Pending reviews
 - Cases forwarded from Case Worker
 - Assessment pending
-

4.6 CASE WORKER DASHBOARD

KPIs:

- Drafts from House Parent
 - Interviews pending
 - Assessments pending
-

4.7 HOUSE PARENT DASHBOARD

KPIs:

- Draft forms created
 - Pending submissions
 - Assigned residents
-

4.8 WORKER DASHBOARD

KPIs:

- Draft entries
 - Assigned residents
 - Tasks
-

4.9 CENTER ADMIN DASHBOARD

KPIs:

- Full center stats
 - User activity
 - Workflow bottlenecks
-

4.10 SUPER ADMIN DASHBOARD

KPIs:

- System-wide analytics
 - User logs
 - Errors / failures
 - Data sync status (Prospect)
-

5 ERPNext IMPLEMENTATION (ACTUAL)

Create Workspaces

You will create:

- Head Office Workspace

- Division Workspace
- District Workspace
- Center Workspace (shared template)

✓ Use Components

Component	Use
Number Card	KPI
Dashboard Chart Visualization	
Report	Drill-down
Shortcut	Quick actions

✓ Example Number Card

Active Residents

- DocType: Resident Profile
- Filter:

status = Active

🧠 Center Filtering Trick

Use:

center = user_default_center

or

Use **User Permission**

🌐 6 PROSPECT INTEGRATION (ADVANCED)

You will NOT sync everything.

Only send:

Data	Purpose
Monthly KPIs	Trend prediction

Data	Purpose
-------------	----------------

Risk Levels	Risk forecasting
-------------	------------------

Case duration	Efficiency prediction
---------------	-----------------------
